

## **Certificate Course in 'Chemistry in Everyday life'**

***This Certificate Course will give you the required General awareness & Alertness while carrying out your daily routine***

White colour salt when dissolved in water, disappears and forms a transparent solution with water. Have you ever thought why this happens?

Similarly do you know why tooth paste is used for brushing our teeth?

There are many questions which remain unanswered due to the lack our approach towards general chemistry.

This 30 hours dedicated course on Chemistry in everyday life will bring many such phenomenon's before you that you observe on a regular basis but don't know the chemistry behind it.

***Enrol to know more about it!***
