REPUBLIC DAY

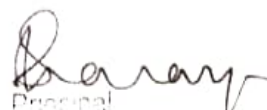

(26th January, 2018)

On 26th January, 2018, National Service Scheme of our College has participated in an activity on "Cleanliness drive at SGNP". In all 27 NSS Volunteers and 10 Non- NSS Volunteers have participated in this event.

The volunteers were instructed to reach college by 8:30 a.m. They hoisted the flag and sang National Anthem. At 9:30 a.m. they left the college to reach SGNP (Sanjay Gandhi National Park), Borivali. This activity was a part of SWATCH BHARAT ABHIYAN. They started picking plastic bags and waste non-degradable material from the ground. The National Park was very packed because of holiday. The activity ended at 2:00 p.m. The passionate involvement of volunteers made the event successful. This activity was photographed by programme officer as a record.

Report on green Bappa seminar

Our college organized a workshop on green Bappa (Documentary film), 6th Jan Mr. Mithun Udyawar from Ophiuchus film, and he spread awareness about green environment. This film was shown to nearly 150 student of our degree college.

That film was made to spread information about how does people celebrate the Ganpati festival? What kind of pollution problems we people faced during such festivals and how would we have to take care of our environment by just changing our method of celebration? All students were impressed by that documentary. Teachers shared their experiences with students for the same.

The film had a Positive impact on students.

REPORT ON TREE PLANTATION DRIVE

1ST August, 2017

The NSS unit of Ghanshyamdas Jalan college of Science, Commerce and Arts had organized Tree Plantation Drive on the occasion of Van Mahotsav in Palghar. The drive was conducted to create awareness on importance of tree plantation in our environment and to help nature and mother earth to get its natural beauty and components back.

The volunteers planted various types of plants. Our volunteers show great enthusiasm in the plantation drive. The Tree Plantation drive was aimed at combating many environmental issues like deforestation, erosion of soil, global warming and hence enhancing the beauty and balance of the environment.

National Service Scheme Unit organized

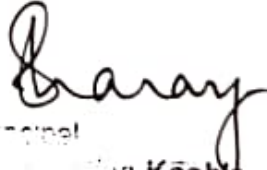

CLEANLINESS DRIVE

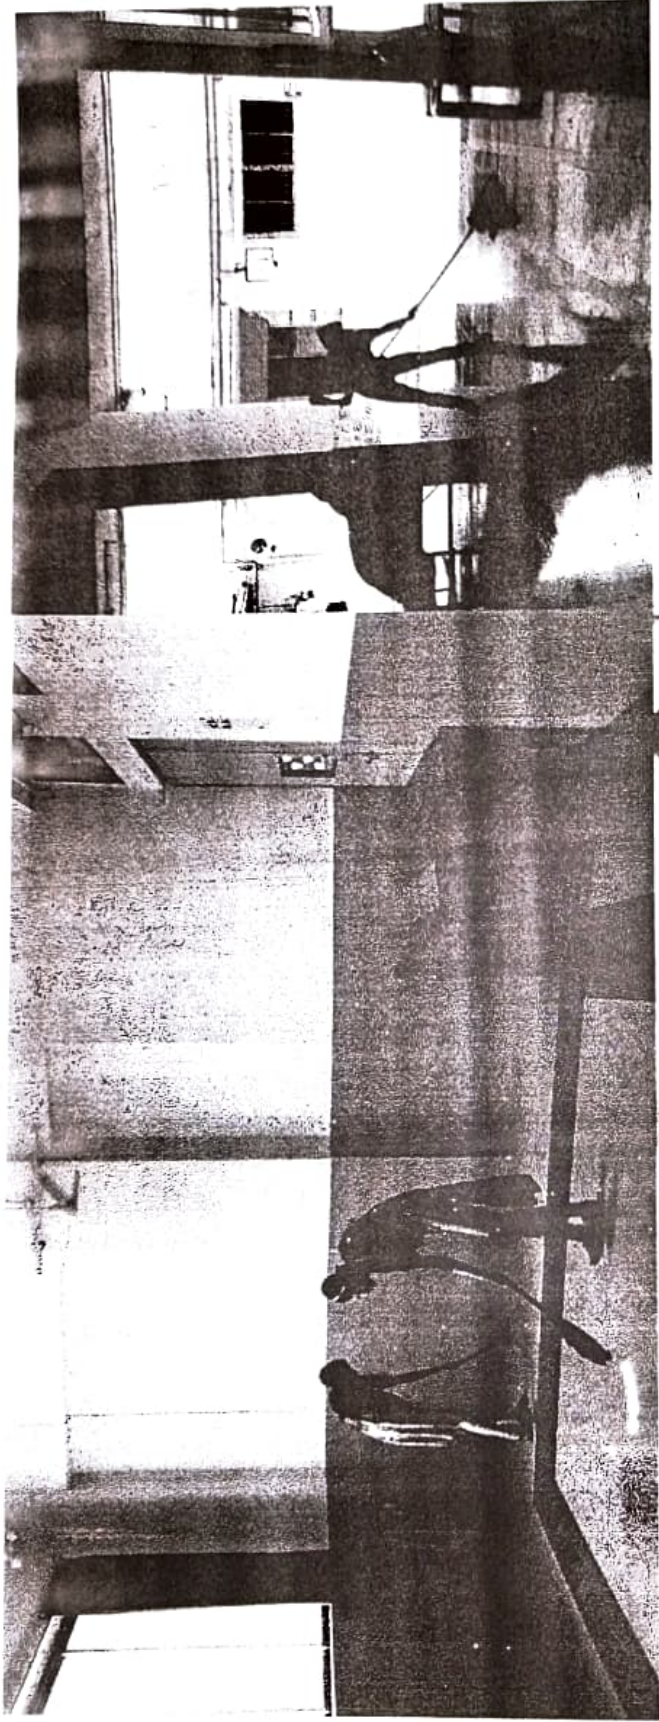

(19th and 20th August 2017)

The National Service Scheme Unit of Ghanshyamdas Jalan Degree College of Science, Commerce & Arts, Malad had organised a Cleanliness drive on 19th and 20th August 2017. Mr. Darsh Chitalia Programme Officer (PO) of NSS, 50 NSS volunteers participated in this event.

Swachh Bharat Mission was launched by Hon'ble Prime Minister of India on 2nd October 2014. Swachhta Pakhwada is a fortnight initiative to be carried out under NSS. The main aim is to promote cleanliness. Under this few activities and events were incorporated such as Swachhta shapath, Cleanliness drives, Awareness programme etc. All the NSS volunteers were divided into 2 classes. They were about to perform activities on 2 different dates. On 19th August 2017, First and Second year of Science volunteers were allotted to clean the Laboratories while On 20th August 2017, Third year Commerce volunteers were cleaning classroom and ground. First and Second year of Science volunteers cleaned all the laboratories for e.g. Physical Chemistry, Biology, and Chemistry. They cleaned Chemical bottles, labelled and alphabetically arranged them in the shelf. Next day, Third year Commerce volunteers cleaned 6 classroom and ground floor by Sweeping beaches, Board and Floor. All the activities were supervised by Programme Officer (PO) of NSS and photographs were taken for record.

Report

The “Rotaract Club of Jalan College” in collaboration with “The Rotary Club of Bombay Kandivli” has successfully conducted the “Grocery Donation Drive” to the underprivileged school children who are studying in tribal school in Manor Village at Palghar District on Friday, 25th February 2022.

Our Rotaractors distributed nutritious grocery items to the underprivileged children in Zilha Parishad School of Patilpada in Manor Village of Palghar District so that they may get the sufficient nutrients which are required for their healthy growth.

We also encouraged the school children to practice the good personal hygiene at home and in the school premises.

We convey our wholehearted thanks to the entire team of Rotaract Club of Jalan College for their kind cooperation in organizing and making this drive successful.

Report

“Rotaract Club of Jalan College” in collaboration with “The Rotary Club of Bombay Kandivli” has successfully conducted the “Blanket Donation Drive” to the underprivileged people at Chahade and Manor Village at Palghar District on Friday, 28th January 2023.

Rotaractors distributed warm woollen blankets to needy people in Chahade and Manor villages in the Palghar district so that they may be able to protect themselves from cold on winter nights. For getting relief from the cold, more than 20 selected helpless and poor people got blankets in tribal village of Palghar District.

We also visited the Municipal School of Tribal Community, in Manor Village to cheer the students.

We convey our wholehearted thanks to Dr. Rajeshwari Ravi, Director, of Ghanshyamdas Jalan College of Science, Commerce, and Arts, and the entire team of Rotaract Club of Jalan College for their kind cooperation in organizing this drive.

ESSAY

Swachh Bharat Abhiyan

Swachh Bharat Abhiyan is one of the most significant and popular missions to have taken place in India. Swachh Bharat Abhiyan translates to Clean India Mission. This drive was formulated to cover all the cities and towns of India to make them clean. This campaign was administered by the Indian government and was introduced by Prime Minister, Narendra Modi. It was launched on 2nd October in order to honor Mahatma Gandhi's vision of a Clean India. Moreover, the Indian government intends to offer all the citizens with hand pumps, proper drainage system, bathing facility and more. This will promote cleanliness amongst citizens.

Similarly, they also wanted to make people aware of health and education through awareness programs. After that, a major objective was to teach citizens to dispose of waste mindfully.

Why India ~~is~~ needs Swachh Bharat Abhiyan? India is in dire needs of a cleanliness drive like Swachh Bharat Abhiyan to eradicate dirtiness. It is important for

the overall development of citizens in terms of health and well-being. As the majority of the population of India lives in rural areas, it is a big problem.

Generally, in these areas, people do not have proper toilet facilities. They go out in the fields or roads to excrete. This practice creates a lot of hygiene problems for citizens. Therefore, this Clean India mission can be of great help enhancing the living conditions of these people.

In other words, Swachh Bharat Abhiyan will help in proper waste management as well. When we will dispose of waste properly and recycle waste, it will develop the country. As its main focus is on one rural area, the quality of life of the rural citizens will be enhanced through it.

In short, Swachh Bharat Abhiyan is a great start to make India cleaner and greener. If all the citizens come together and participate in this drive, India will soon flourish. Moreover, when the hygienic conditions of India will improve, all of us will benefit equally. India will have more tourists visiting it every year and will create a happy and clean environment for the citizens.

Earth is dying

The world is experiencing much damage which causes to great changes. I believe, that it is because of the rude and abusive deeds of its settlers, and these settlers are no other than us, "HUMANS".... It is hard to admit but it is the reality that we, are the main causes of these alarming, frightening and devastating state that our Mother Earth is encountering.

According to the Bible book of Genesis 1:1 says that "In the beginning God created the heaven and the earth and He made people in this world. So, the earth is made for the people to live with. People are made to protect and be concerned the creation of God. Is this really happen today? How about you? Are you taking care of this creation? or making other one? It is considered that human-beings possessed the principal responsibility to shield and sustain the God-given beauty of His creation but still, most of the people didn't adapt and realize their important obligation, instead, they are violating and damaging this duty by taking-away the treasures of Mother Earth due to their selfishness and greediness for "power", "fame", "authority" and especially, "wealth".

Just like as the illegal loggers non stop cutting trees that made the situation worst, illegal fishersthatsome of them are using dynamites in catching fish, miners and the factories that accumulate of harmful substance on the ground, and water causes pollution.

People wasting their efforts in doing illegals, destructing God's creation. We didn't mind it that all of these creations in this world are valuable and important matter to live It is true that the world's

resources are more than enough to meet our needs but so insufficient to satisfy our self-centered ambitions and desires.

PROLOGUE:

G. D.Jalan College is located at Malad (E) in Mumbai. It is a reputed Academic Institution operative for the last eight years. At the behest of the Management and the Trust this energy Audit was conducted and the report on Energy Audit is presented herein under. As an Academic Institute the building utilities are as under

- Indoor Lights and Fans
- Air Conditioning units for comfort cooling
- Pumps for Water distribution
- Computers for Administrative purpose and Education

All the above mentioned loads use electricity as source of energy for operations. There is a provision of Standby Diesel Generator which is very sparingly used since Electricity is available 24X7 in Mumbai. As such the D.G. set negligible role as power source and this report does not give weightage to energy conversion from Diesel as an energy Source.

Further, the College Building has three service meters and the energy consumption from the three meters is accounted for in the report.

It is hoped that the report and its findings / suggestions will be found in order and appreciated. The field team thanks the management and all concerned for the coordination and assistance to the field team.

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

EXECUTIVE SUMMARY

- 1) Various loads consuming power are dealt with and the same reflect in the report.
- 2) There is a provision of Standby Diesel Generator which is very sparingly used since Electricity is available 24X7 in Mumbai. As such the D.G. set negligible role as power source and this report does not give weightage to energy conversion from Diesel as an energy Source
- 3) At present the energy bench mark works out to 0.231 KWH per Sq. ft.
- 4) Areas where energy saving is not possible (e.g. the Computers and Elevators) are also considered in the report
- 5) Grid connect Roof Top Solar is suggested with aim of reducing carbon foot print to help the environment as a Green Initiative. Although the report project the payback shown in the report is on higher side, the same is expected to be lower when proposal from the Solar Vendors are called upon.
- 6) Annexure 5 attached with the report shows that there is a need for identification and tagging of feeders in the power distribution, removal of congestions from the meter room, generating SLD of power distribution by initiating Electrical Safety Audit to address to various other issues relating to operational and system safety.
- 7) The summarized energy savings are in the Table below with budgetary cost of investment wherever applicable and the corresponding payback for the investment in years. Solar is not included in the table below.
 - 1) PF Correction does not show attractive incentive earnings at present.
 - 2) Switch over from Desktops to Laptops is not a viable proposition.

Table – Summary of ESOs (Energy Saving Opportunities)

Energy Saving Area	Annual Energy Saving Potential (Rs. / Annum)	Investment Cost (Rs.)	Simple Payback (Years)	Priority
Indoor Lighting	6639.00	----*	5.0	Medium
Ceiling Fans	1902.00 per fan	3,71,200.00	1.68	High
Raising set point AC Units	1158.00	Nil	Immediate	High
Use of AC Savers	73,872.00	90,000.00	1.22	On approval after Trial
TOD Benefit on Pump Operation	29,250.00	Nil	Immediate	High

NOTE: * Investment cost is not considered since the operational hours of Lighting is much lower which in turn will increase the Payback Period.

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

The above summary covers 5 month Data for each of the connected meters. The observations and comments are as under.

Energy cost is Rs 10.00 per unit or per KWH.

Note: Meter Number L988920 has loads mixed with the adjoining School Loads and hence not to be considered

Energy Bench Mark:

Total Power Consumption is average terms is: $(445.5 + 944.6) = 1390.10$ KWH, for 5 month duration. It may be noted yearly total consumption will be lesser considering the vacation time of one month when the power consumption will far less.

It is difficult to bench mark the power consumption for an educational institute in terms of KWH/ Unit of productivity. Hence this report considers the Usable area of the building for energy benchmark.

Energy Bench Mark: $1390.10 \text{ KWH} / 60000 \text{ sq. ft.} = 0.0231 \text{ KWH/ Sq. ft.}$

Purpose of the bench mark is to know improvement (reduction) in KWH consumption /Sq. ft. post implementation of the energy audit recommendations.

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

2.0 Energy Saving Opportunities

2.1] Indoor Lights

Annexure 1 presents the connected lighting loads. It may be noted that about 99% of the lights at present are Fluorescent lights and the rest converted to LED type lights.

LED lights save up to 40% energy. For same light output in lux or lumen terms the LED light wattage is 60% of the existing Fluorescent Light wattage. Based on this the savings are projected as under.

Annexure 1 – Attached herewith shows the details of light fittings. The total wattage of the fittings installed works out to 8886 watts. It is observed that most of the time the 80% of the light fittings remain switched OFF. Total working hours of mere 2 hours are considered for 30% of the total wattage. This is considering the Monsoon months and winter months.

Thus operational lighting is about $0.3 \times 86688 = 2665.80$ Watts = 2.66 KW.

Realized energy saving: $2.66 \text{ KW} \times 0.40 \times \text{Rs } 10.00 \text{ per KWH} \times 2 \text{ hours /day} \times 26 \text{ days per month} \times 12 \text{ months} = \text{Rs } 6639.00 \text{ per annum.}$

Most of the time, most of the indoor lights are not working. Due to low working hours the payback is expected to be high; approx. 5 years.

The saving amount is not high. In view of this, below mentioned strategy for implementation of replacing FTL light fittings by LED fitting is suggested.

1. Priority 1 – Choose locations where FTL Lights are ON for most of the time
2. Priority 2 – Replace FTL Light fittings by LED fitting when existing light fitting fails

2.2] Ceiling Fans

Annexure 2 presents the connected Fans loads. The present day BLDC technology is claimed as energy saving technology when it comes ceiling fans. Reputed companies offer BLDC fans. The economics and payback gets covered in the Table 4 given below.

Type of Fan Rated watts Hourly Consumption Daily Consumption yearly Consumption Yearly Energy Cost

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

Table 4 – Ceiling Fan related Energy consumption (BLDC v/s Conventional Ceiling Fan)

Type of Fan	Wattage	Hourly Consumption	Daily (8Hrs) Consumption	Annual	
				Consumption (286 Days)	Energy Cost (Rs.)
Induction Fan	75 Watts	0.075 Units	0.60 Units	171.60 Units	3035.60
BLDC Fan	28 Watts	0.028 Units	0.224 Units	64.06 Units	1133.29

Yearly Consumption is worked out for 11 months, 26 days = 286 days

Net Energy Cost Saving is : Rs. 1, 902.34

Approx. cost of 48" BLDC Fan is: Rs. 3,200.00

Payback per Fan is : 1.68 Years

Notes:

- (i) Salvage cost of existing fans is not considered in payback
- (ii) If number of running hours of fans increases per day, the payback will get realized earlier.

Investment cost for 116 nos. of fans will be Rs. 3, 71,200.00

2.3] Air Conditioning units for comfort cooling

Annexure -3 attached with the report gives the TR (Tonnage) wise count of Air Conditioning units in use in the building. The Air Conditioning units in operation at given time during the day are considered to be 5 hours of which the compressor ON time is expected to be 2 hours.

2.3 a) Lowering the Set Point

Average operating hours of each AC unit is taken as 5 hours for 288 days (same as under 3.2 above). Those Air Conditioning units which are set at temperature less than 22°C have scope for energy savings by raising the set point to 22°C/23°C.

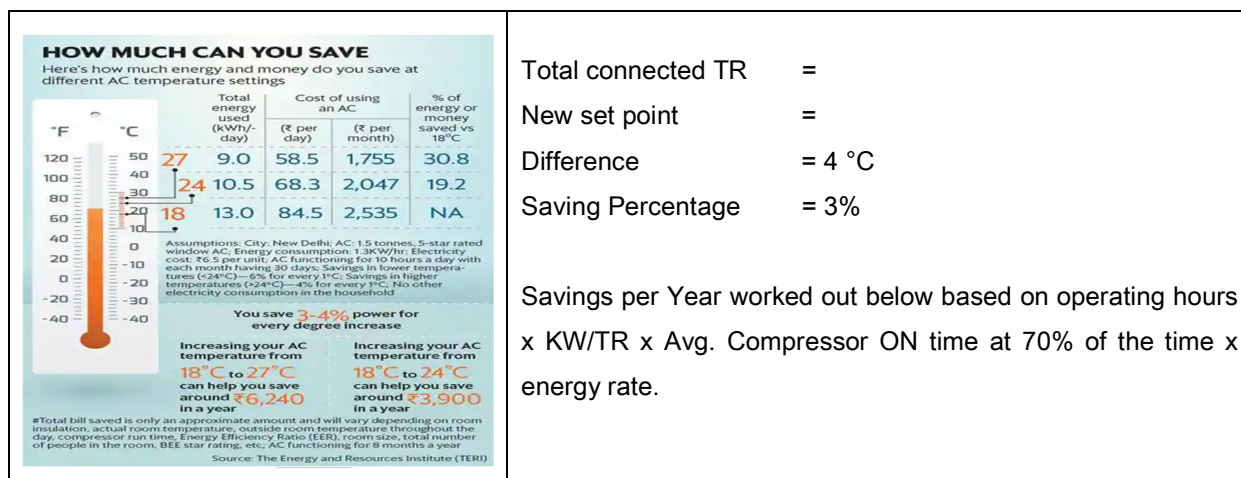

The list shows set point temperatures only for few units. These were the units which were in operation. The rest were switched off since the class rooms were empty.

Energy Savings by altered set point from 19°C to 23°C/24°C: would save about 3% of power consumption rated.

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

From the set point read from the sites only 2 out of 8 units was found to have set point at 18°C. This works out to 25%. This percentage is applied to the total AC count of 12 nos. Thus, 3 ACs may have set point at 18°C.

Savings per day

3 ACs of 1.5 TR => 1.5 KW x 3 = 4.5 KW

Average compressor ON time is taken as 3 hours / day

Savings of 3% on 4.5 KW works out to 0.135 KW for 3 hours day = 0.135 x 3 = 0.405 KWH / day

Annual Saving = 0.405 KWH x 286 days x Rs. 10 per KWH = Rs. 1158.00

2.3 b) AC Energy Savers

Simple thermostat based AC control can only maintain the set temperature. However it is not effective in saving energy. Microprocessor based AC energy savers with advanced algorithms having two additional sensors to detect room temperature as well as coil temperature claim to be saving more energy as described below.

The manufacturer presets the Ac saver for hottest temperature as per geographical location. Alternatively the programming facility with the saver allows the user to enter the data.

Once the above is done the depending on the set temperature, the saver will save energy consumption varying from 15% to 25% depending on the set temperature. These savers can be used with Window, Split, and Cassette type AC units.

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

To monitor the savings from the Electronic Power savers the below mentioned steps are suggested.

- (i) Earmark one AC unit that runs 24x7 & monitor and record power consumption of the units for 2 to 3 months.
- (ii) Apply the Energy Saver and monitor power consumption for same time and for the same ambient conditions (i.e. same months of the year) & ensure that run time equals the run time against (i) above.
- (iii) The difference in power consumption is the saving.
- (iv) Field testing for one unit can be the basis for applying the AC savers to other AC units which run for most of the time for quicker pay back.

AC units are considered for saving calculations

(Installed Total split AC Capacity 57 TR. Considering 50% ACs is ON the power is 22.8 KW)

Annual Saving Calculations

28.5 KW x 0.15 x 6 Hrs./Day x 24 Days x 12 Months x Rs. 10.00 per KWH = Rs. 73, 872.00 per annum.

Investment Cost: Electronic AC saver cost is Rs 7500.00 per saver, approx., total cost of 12 AC Savers will be Rs. 90, 000.00. The calculated simple payback gets worked out to 1.22 years.

Note: 1 year may be considered as Good Payback time. Desired procurement value for the savers may be less than or equal to the savings mentioned above.

2.4] Pumps for Water distribution

Table 5– Recorded Pump Power

Serial No.	Actual	Run / Day	Timing	
BMC Water Pump	3.75 KW	2 – 3 hours	2 Hours	6:00 PM Onward
Bore Well Water Pump	5.52 KW	12 Hours	20 minute	Intermittent

There are two pumps in the premise. The Bore well pump operates intermittently for every 20 minutes in succession. Since this is the system requirement, this pump is excluded for TOD benefit calculation.

TOD (Time of the day) tariff provision in the electricity bills mentions that using electricity between 22:00 hrs. to 6:00 hrs. will qualify for Rs 0.75 per KWH. If the BMC Pump can be operated from 22: 00 hours every for 2.5 hours every day the TOD benefits per annum will work out as under.

3.75 KWH x 2.5 Hours /day x 26 days x 12 months @ RS 10.00 per KWH = Rs. 29, 250.00 /Annum

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

2.5] Elevator Power

The elevators in the building are microprocessor controlled with VFDs (Variable Frequency Drives).

These elevators are energy efficient and no scope of further energy saving is there. The rated & recorded elevator power is shown below.

Table 6 - Lift Motor Details:

Serial No.	Rated	Actual
Lift 1	5 KW / 11 A / 0.83 PF	5 – 6 A (VFD)
Lift 2	4 KW / 9.5 A / 0.80 PF	4 – 5 A (VFD)

2.6] Computers in the Building

The below table shows the list of computers installed in the premises. There are about 75 numbers computer of different makes. It is observed that the computers are switched OFF when not in operation and total switching OFF is done so that the screens, as well as, the CPU both get cut from the power supply. Thus there no power wastage because of idle power ON of the CPU.

Table 7– Installed Computers in the premises

Area / Location	No. of PCs
Computer Room	60
Information desk	3
Director Cabin	1
Principal Cabin	1
Other (LS)	10
Total	75

Switching over to Lap from the Desktops

Computer's power usage will depend on the type of computer. Laptops use between 15 and 60 typically while desktop computers range between 60 and 250 watts. Thus it can be concluded that Desktops consume about 4 times the power that a Laptop consumes.

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

Assuming that in a batch 70 out of 75 numbers of computers (Desktops) are ON, and the run time is minimum 4 hours a day the power consumption of Desktops and Laptops is shown below.

Desktops : $0.230 \text{ KW} \times 70 \text{ Nos.} \times 4 \text{ Hrs.} / \text{Day} \times 288 \text{ Days/year} = 18547.20 \text{ units per year}$

Laptops : $0.060 \text{ KW} \times 70 \text{ Nos.} \times 4 \text{ Hrs.} / \text{Day} \times 288 \text{ Days/year} = 4838.40 \text{ units per year}$

Energy Consumption Difference = $18547.20 - 4838.40 = 13708.80 \text{ units per year}$

Energy Saving, Investment Cost and Payback:

Energy Saving in monetary terms = $13708.80 \text{ units} \times \text{Rs. } 10.00 \text{ per unit} = \text{Rs. } 1,37,088.00$

Laptops may be times more expensive compared to the Desktops for same system configuration.

Considering Desktop price of Rs 35,000.00 and Laptop Price of Rs 80,000.00 the additional total cost of procurement of Laptops will be: $\text{Rs. } 45,000.00 \times 70 = \text{Rs. } 31,50,000.00$

Simple Payback: 22.97 years.

The payback is too long and hence not recommended

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

2.7] Power Factor Correction and Demand

The energy Bills from Utility Power Company considered in this report show registered Power Factor in the Table below.

Table 8 – PF Improvement Scope & Incentives

Meter No	Registered Avg. PF	Scope for improvement	Additional Annual Incentives (Rs.)
L1005392	0.984	0.995	720.00
L1005393	0.97	0.995	160.00
L988920	0.964	0.995	470.00
Total →			1350.00

At present there are no penalties on account of power factor since the recorded average values shown in the Table above are not less than the minimum value of 0.95. Incentives are earned at present also. The incentives can be increased if the PF values are increased up to 0.99 (not exceeding 0.995).

$KW \times (\tan\theta_1 - \tan\theta_2) = 7.0 \text{ KW} \times (0.2471 - 0.1425) = 7322 \approx 1.0 \text{ KVAR}$ (total KVAR across 3 meters)

It can be seen that the required capacitance across 3 meters is very less. Also the incentive to be earned at the end of the year is not impressive.

Suggestion: Present PF is OK. Keep monitoring the PF regularly every month. In case PF reduces drastically, investigate and if required replace the capacitor.

Assuming that the PF is increased to 0.99 by adding capacitors, the incentives that can be earned are shown in the Table 8 above.

2.8] Renewable Energy – Solar Power

As a thumb rule, you require 10 sq. meter area for a 1 kW solar system capacity for a shade free area. Shading is an important factor which decides the positioning and size of the plant. In addition Tilt Angle and orientation of Solar PV modules decide the power generation from PV Solar.

The area on the terrace is about 300 Sq. m. Excluding area of about 20% for maintenance and walk way for access to panels, the available is about 240 Sq. m

VISION POWER FACTx

POWER QUALITY – ENERGY AUDITS – SAFETY AUDITS – POWER SYSTEM STUDIES

The expected power generation depends on Solar radiation as per the latitude and longitude of the geographical location of the Solar Installation. In Mumbai solar irradiation can be taken as 5000 w/m².

The MNRE is a Govt. site and calculations provided by MNRE are reproduced herein under.

Table 10 – Grid Connect Solar Plant and Reduction in Carbon emission

Average solar irradiation in MAHARASHTRA state is 1266.52 W / sq.m

1kWp solar rooftop plant will generate on an average over the year 5.0 kWh of electricity per day (considering 5.5 sunshine hours)

1. Size of Power Plant

Feasible Plant size as per your Roof Top Area :

24.0kW

2. Cost of the Plant :

MNRE current Benchmark Cost (without GST) :

Rs. 38236 Rs. / kW

 [View Benchmark Cost List](#)

Without subsidy (Based on current MNRE benchmark without GST) :

Rs. 917664

With subsidy 0 (Based on current MNRE benchmark without GST) :

Rs. 917664

3. Total Electricity Generation from Solar Plant :

Annual :

36000kWh

Life-Time (25 years):

900000kWh

4) Financial Savings :

a) Tariff @ Rs.17.00/ kWh (for top slab of traffic) - No increase assumed over 25 years :

Monthly :

Rs. 51000

Annually :

Rs. 612000

Life-Time (25 years) :

Rs. 15300000

Carbon dioxide emissions mitigated is

738 tonnes.

This installation will be equivalent to planting

1181 Teak trees over the life time. (Data from IISc)

Disclaimer: The calculation is indicative in nature. Generation may vary from location to location.

The total cost of Solar Plant will be Rs. 9, 17, 664.00 without taxes.

The annual generation is about 36000 KWh. The informed reimbursement by the MSEDCL for Grid Connect solar is @ Rs 4.00 per KWH. Thus expected revenue per annum may be considered as Rs. 1, 44, 000.00. The payback in this case is 6.3 years. More information as of present date from the PV Solar will be collected and provided.

Note: The above cost structure is indicative and lesser pay back of about 4.5 years o 5 years is likely.
