Upper Govind Nagar, Malad (East)**

GREEN & ENVIRONMENT AUDIT REPORT January 2022

**A 92 2ND FLOOR, SHIVSHAKTI BLDG,
OLD TELIGALI, CHINCHPOKLI, MUMBAI,
MAHARASHTRA 400012**

ACKNOWLEDGEMENTS

NaturalisT Foundation conveys their gratitude and thanks to the management of **Ghanshyamdas Jalan College of Science, Commerce & Arts, Malad (East), Mumbai** for conducting the Environment & Green Audit, which was conducted in **January, 2022**.

We also convey our sincere thanks to Dr.Rajeshwary Govindappa, Principal, Dr. Rajeshwari Ravi, Director and Prof. Trupti Nagadiya, the IQAC Coordinator for showing a keen interest and their whole-hearted support in conducting the Environment & Green audit.

The Environment & Green Audit study team also acknowledges the Professors of Department of Botany & Department of Zoology for providing all the necessary information and coordination during the study that helped us to complete the Environment & Green Audit successfully.

(Name of Team Members)

Mr. Sachin Rane

Mr. Anurag Kalsekar

For NaturalisT Foundation

Authorized Signatory

EXECUTIVE SUMMARY

The Green and Environment Audit refers to the greenery and environmental analysis around the campus. Rapid Urbanization around the city has made many colleges to shrink in the green cover. The College is taking constant initiatives for maintain its greenery. The maximum care is taken to minimize the environment pollution by implementation of policy. Waste management is done on regular basis, with the help of segregation and disposal in the tuned way. The Green campus Policy are made and implemented for maintaining the greenery and cleanliness of the campus area. The 119 trees has sequestered 4.5317 kg of Carbon. In all 26 medicinal plant species and 52 species of plants including Trees, Shrubs, Herbs and Climbers are present in the campus. The Water Management is taking place by means of rainwater harvesting technique and awareness activities.

SN	Area	Observations
1.	Green Management	Well maintained greenery in the campus
2.	Water Management	Rain water Harvesting technique and by creating awareness with signboards and activities.
3.	Solid Waste & E waste Management	The Dry and wet waste collection bins are present in all the floors and around the campus. Deposition of waste into the collection centers

ABOUT THE COLLEGE

The college is located at the Malad (East) with the geographical coordinates with Latitude 19.1758177°N & Longitude 72.8519272°E.

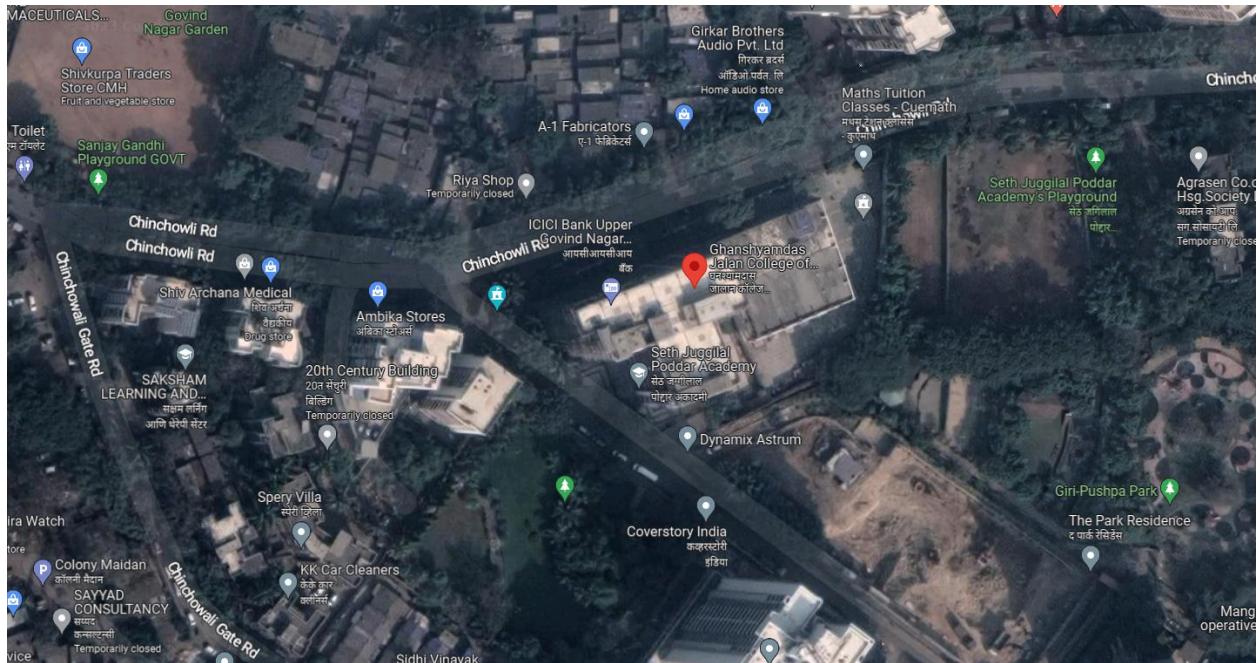

FIGURE 1: COLLEGE LOCATION

OBJECTIVES:

The Objectives of the Audit are:

- To promote the environment & green management in the college campus.
- To document the floral and faunal diversity of the college
- To document carbon sequestration within the campus location.
- To identify the loopholes and provide recommendations on that basis for smooth management.

METHODOLOGY

In order to conduct the environment & green audit the following tools were used;

- Preparation of Questionnaire
- Collection of Primary Data
- Analysis of the collected data
- Recommendations.

For audit analysis the following components were considered

1. Greenery management
 - Listing of Floral & Faunal Diversity
 - Number of species present & their Attributes
2. Water Management
 - Rainwater Harvesting system
3. Solid & E-waste Waste management
 - Collection & segregation system

The policies which are already made and implemented by the college for maintenance are attached in the **Annexure V.**

GREEN AUDIT

1.1. INTRODUCTION

The Green Audit describes the greenery in and around the area. The audit involves the listing of flora & fauna around the campus. Carbon sequestration is the process of capture and long-term storage of atmospheric carbon dioxide (CO₂) in the biosphere such as the oceans, terrestrial biomass, soils and geologic formation. The Carbon sequestration could be estimated with the help of biomass. To estimate biomass the height and girth is measured. To study the diversity each tree in the campus is counted.

1.2. METHODOLOGY

The formulas were used for the calculations of the carbon sequestration:

Aboveground Tree Biomass (AGTB)

Above ground tree biomass (AGTB) allometric equations were developed for 47 tree species. A mixed-species tree equation based on breast height diameter (DBH) and tree height (H) provides acceptable estimates of stem plus branch (>10 cm in diameter over bark) volume (Chave *et al.*, 2008; Beets *et al.*, 2012). For AGTB biomass calculation IPCC recommended methodology was used following formula given by (Ravindranath and Ostwald, 2007; Hangarge *et al.*, 2012)

$$\text{AGTB} = V \times \rho$$

AGTB = above-ground tree biomass [kg];

- V = Volume of tree [m³]
- ρ = wood density [g cm⁻³] specific to each tree species;
- The wood densities were obtained from the www.worldagroforestrycentre.org

Volume, V, is calculated using formula

$$V = \pi r^2 H$$

- r = radius of the tree trunk at breast height [m]
- D = tree diameter at breast height [cm]; and
- H= tree height [m]

Below Ground Biomass (BGB)

The following relationship is used to estimate the root biomass developed by (Hangarge *et al.*, 2012).

$$\text{Belowground biomass} = 0.25 \times \text{AGTB}$$

$$\text{Total Biomass} = \text{AGTB} + \text{BGB}$$

Dried Weight

The net dried weight is, 73.4 % of the Total Biomass stated by (De Filippis *et al.*, 2015).

$$\text{Dried Weight} = 73.4\% \times \text{Total biomass}$$

Carbon content

According to the (Ma *et al.*, 2018) the net carbon content in the plant is 50% and vary in accordance.

$$\text{Carbon content} = 50\% \times \text{Dried mass}$$

1.3. OBSERVATION & RESULTS

The campus has good diversity and maintains good bio-diversity. Various plants in the campus are planted by the volunteers in tree plantation programs. The college has taken an initiative to introduce medicinal garden which comprises of various plants potted and displayed with their botanical names, common names, family & medicinal uses. To promote the biodiversity in the college , college has also taken the initiative to construct the butterfly garden within the campus. This attracts lots of butterflies in the campus. The results of the listed of flora is mentioned in the **Annexure I**, List of medicinal plants planted in pots are in **Annexure II** and fauna in **Annexure IV** & carbon sequestered is encountered in the **Annexure III**. 119 trees are recorded in the campus. In total **4.5317 kg** of Carbon sequestration is calculated.

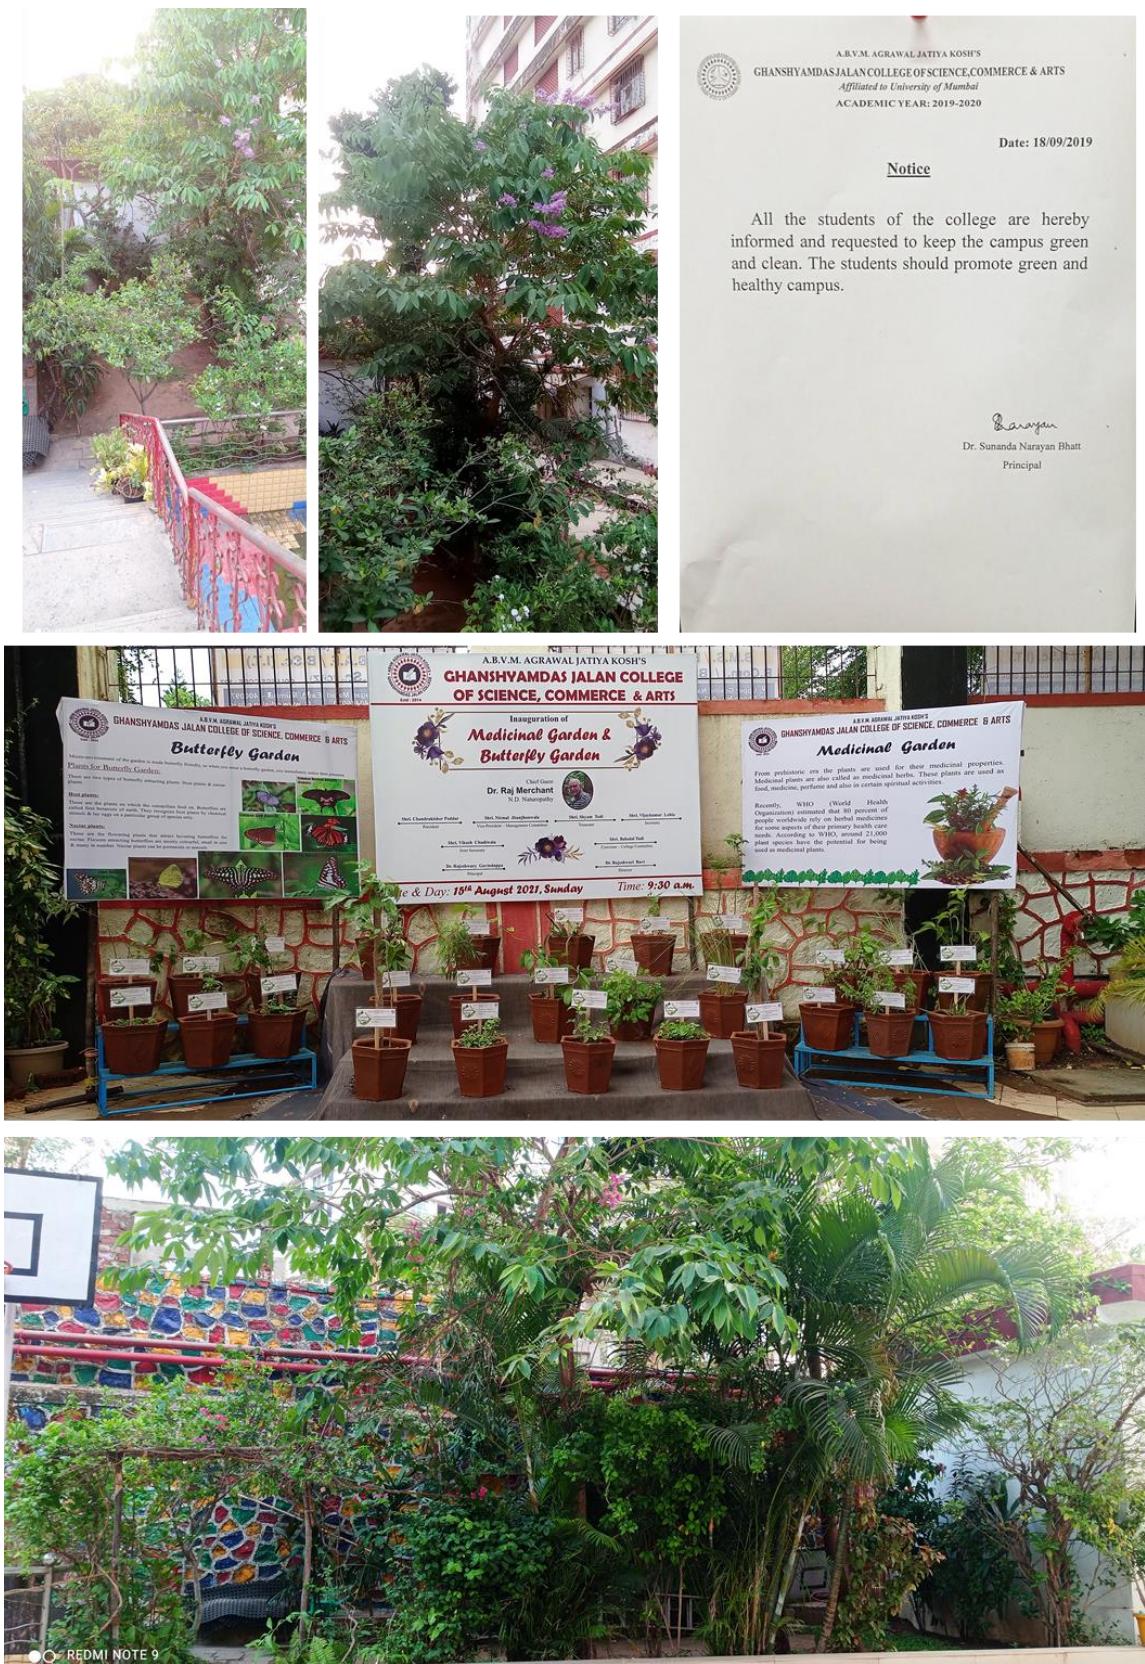

FIGURE 2: GREENERY IN THE CAMPUS

1.4. RECOMMENDATIONS

- To promote the awareness regarding plants the scientific names must be assigned to all the plants.
- Plantation of more indigenous species of plants in the campus
- To promote biodiversity fruit bearing trees must be planted to attract birds & insects.
- Promoting more awareness activities related to medicinal plants & economically important plants.

FIGURE 3: TREE PLANTATION DRIVE

WATER MANAGEMENT

1.1. INTRODUCTION

The rapid decrease in water level has led to water shortage problems in the urban areas. Water is necessary for all the living being so, it becomes significant to save or use it in the effective technique. The Water management refers to the management of water in the formatted and effective methods. This involves the activities undertaken to lower the wastage of water. This may involve the development of plan to save the water usage.

1.2. METHODOLOGY

The survey was taken to understand the main source of water and usage pattern. The questions were asked for the assessment.

1.3. OBSERVATION & RESULTS

It was observed that the college has rainwater harvesting system to channelize the flow of Rain water to underground earth. This also help to recharge the ground water levels. The system is properly working. The borewell water is used for toilets and other usage. The college is also undertaking various promotional activities to save water wastage by placing signboards & notices regarding Save water, turning off the tap, etc. The liquid chemical waste disposal is done with the help of standard guidelines recommend by the United Nations (Anonymous, 2006).

1.4. RECOMMENDATIONS

- The sprinklers could be installed to save the wastage of water while watering the plants.
- More activities must be undertaken to promote the save water activities.
- Installation of sensor based tapes to save the water.
- Use of bio-degradable and non-toxic detergents for cleaning purpose & as an insecticide & pesticides.

FIGURE 4: RAIN WATER HARVESTING

SOLID WASTE MANAGEMENT

1.1. INTRODUCTION

The solid waste can be further divided into degradable and non-degradable waste. The degradable waste refers to fruit waste, vegetable waste, edible waste, which is organic and could be easily decomposed. The type of waste also generated in the college is biohazardous & biomedical. The non-degradable waste can be indicated as Plastic, Glass, paper etc. The non-degradable waste is bifurcated into recyclable and non-recyclable waste. The management of all kinds of waste in the channelized format is called as Solid waste management. This could be done by implementation of policies & proper planning.

1.2. METHODOLOGY

The questions were asked for the assessment. The observation were recorded and analysed for recommendations.

1.3. OBSERVATION & RESULTS

The bins are installed on all the floors in the college, which makes easy college and segregation of solid waste. The collected waste is given to BMC (Brihamumbai Municipal Corporation) collection system in the segregated form. The bio-hazardous waste collected from the laboratories is disposed in the hospitals or pathology for systematic decomposition. The college has also installed Sanitary Pad Incineration machine which helps in disposal of biomedical waste. The college is also undertaking various awareness programs to reduce waste and plastic usage. The E waste collection bins are also installed and college steadily handovers to the collection centers. The Radioactive waste is not generated in the college.

1.4. RECOMMENDATIONS

- The Organic waste decomposition is recommended by installation of vermicomposting.
- More initiatives could be made towards plastic free campus or to reduce the plastic usage in the campus.
- More recyclable waste collection bins & E Waste collection bins to be installed and publicise.
